Blocks 1

Block Title

This is a regular block.

Alert Block Title

This is an alert block.

Example Block Title

This is an example block.

Blocks 2

Definition (XXX)

This is a definition block.

Lemma (XXX)

This is a lemma block.

Corollary (XXX)

This is a corollary block.

Example (XXX)

This is an example block.

Blocks 3

Theorem (XXX)

This is a theorem block. $a^2 + b^2 = c^2$

Proof.

This is a proof block. □

Algorithm

Algorithm 1: Euclid's algorithm

Data: Two nonnegative integers a and b

Result: Their greatest common divisor $d = \gcd(a, b)$

```
1 while b ≠ 0 do
2     r ← a mod b;
3     a ← b;
4     b ← r;
5 end
6 d ← a;
```

Code

```cpp
#include <iostream>

int main() {
    std::cout << "Hello, world!" << std::endl;
    return 0;
}
```

```python
def greet(name):
    """
    greets the person passed in as a parameter.
    """
    print(f"Hello, {name}!")

greet("John")
```
